

An Ounce of Prevention is Worth More than a \$100 Million 'Cure.'

And yet that's how much the Government of British Columbia will be paying to repair over 500 leaky schools that are overcome by moisture problems! -B.C. Education Ministry

The Detec Moisture Detection & Monitoring System is the best long-term solution available for hidden water intrusion, mold and indoor air quality issues in our schools.

Detec Systems:

- Provides continuous monitoring and is superior to 'point only' systems
- Prevents mold from ever becoming an issue in areas that are actively monitored and partnered with a pro-active maintenance program.
- Installs easily during construction or major remediation
- Demonstrates proactive risk mitigation to parents and taxpayers
- Ensures the long-term health of our public buildings for future generations
- Minimizes maintenance repair costs and provides quality assurance regarding maintenance programs

Give Yourself a Gold Star for Problem Solving.

Detec Systems is the Most Comprehensive Approach to Structure Monitoring

- Our proprietary Moisture Detection Tape (MDT) identifies even the smallest water-related events.
- Contiguous perimeter application provides complete envelope coverage and an immediate response via standard ethernet connection.
- Remote Monitoring Units (RMUs) record any water-related event immediately, at which point standardized reports are sent to the facilities department, minimizing the chance of the moisture intrusion becoming a bigger issue or large expense.
- Hardwired for reliability. Monitors 24 hours a day, 7 days a week, 365 days a year.

Visit detecsystems.com to find out more about how to protect the buildings that nurture our future generations.

Typical Point Monitoring Systems rely on intermittent sampling to determine if an area is accumulating moisture.

Detec Systems proprietary Moisture Detection Tape provides thorough coverage and uses gravity to its advantage. When water comes in contact with the tape, we know immediately. Additionally, system probes monitor moisture content of the wall sheathing.
